IBD **EGYPT**
JUNE 27-28, 2024
GRAND NILE TOWER

IBD EGYPT

Our Dearest Colleagues,

Over the past few years, with the evolution of novel follow-up and treatment strategies, we had a significant challenge implementing a nationwide, updated protocol.

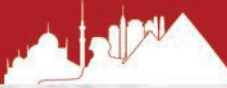

Tens of scientific events, workshops, and training modules were organized all over Egypt were not only focused on physicians but also disease-related community awareness was essential to prepare the population to accept the unique needs of IBD patients.

Today, we can say that most Egyptian gastroenterologists can provide the best care to their IBD patients in the setting of MDT care with the application of the most recent guidelines and available therapeutics.

From here, we found that we now have a national experience with ordinary local circumstances and challenges that we need to address and reach a formula together, a unified solution for every obstacle.

IBD Egypt founded by ESIBD organized in collaboration with different national organizations and IBD centers to provide a demographic overview of the IBD practice in Egypt to be a platform for everyone interested in IBD to share his experience and highlight the challenges.
